

Project Title:

Real Estate Market Analysis:

Project Objective:

The objective of this project is to analyze real estate sales data and develop an interactive Power BI dashboard to understand sales performance, property types, pricing, property area, and location-wise performance.

3. Dataset Description

- **Number of records:** 100
- **Number of columns:** 33
- **Important tables:** 05
- **Important fields:** 33
- **Data source:** Kaggle

Tools Used:

PowerBI, PowerQuery, DAX, Microsoft Excel

Data Cleaning:

Removed duplicates

Handled missing values

Changed data types

Cleaned column names

Transformed data

Created required columns

Data Modelling:

Properties [Property_ID] (1)→ Transactions [Property_ID](*)

Customers [Customer_ID] (1) → Transactions [Customer_ID](*)

Agents [Agent_ID](1) → Transactions [Agent_ID](*)

Date Table [Date](1) → Transactions [Transaction_Date](*)

DAX measures:

Total Sales

Total Properties Sold

Average Property Price

Average Price per Sq. Ft.

Total Property Area

Dashboard:

Key Insights:

1.Overall Property Performance

- Total Properties: 100
- Total Listed Value: 2,040M
- Properties Sold: 57
- Total Sales: 1,174M

- Average Price per SqFt: 10,247.38

→ 57% of the properties have been sold, indicating that more than half of the listed properties have converted into sales.

2. Monthly Sales Trend

- January shows the highest monthly sales at approximately 190M.
- June is another strong month at approximately 185M.
- March records the lowest sales at approximately 40M.
- Sales recover significantly from March and remain relatively strong through April–September.
- October shows another noticeable decline before sales increase again in November.

→ The sales pattern is volatile, with significant month-to-month fluctuations.

3. Average Price per SqFt by City

Based on the chart:

- Delhi has the highest average price per SqFt, around 12K+.

- Nashik and Nagpur follow.
- Ahmedabad, Bengaluru and Chennai are in the middle range.
- Pune has the lowest average price per SqFt among the displayed cities, around 9K.

→ There is a clear difference in property pricing between cities, with Delhi commanding the highest average price per SqFt in this dataset.

4. Property-Type Distribution

- Apartment — 15 (20%)
- Independent — 15 (20%)
- Plot — 15 (20%)
- Studio — 15 (20%)
- Villa — 15 (20%)

→ The dataset has equal representation across all five property types.

5. Agent Performance

The Properties Sold by Agents treemap shows that sales are distributed among multiple agents, with some agents occupying noticeably larger sections.

➡ This visualization can be used to identify agents handling a larger share of sold properties and compare their contribution.

6. Geographic Distribution

The map shows property/agent activity across major cities including:

Delhi, Ahmedabad, Kolkata, Mumbai, Pune, Bengaluru and Nashik, among others.

➡ The dashboard indicates that the dataset covers a broad geographic market rather than a single city.

🔑 Key Insights : Real Estate Market Analysis Dashboard

1. Overall Property Performance

- Total Properties: 100
- Total Listed Value: 2,040M
- Properties Sold: 57
- Total Sales: 1,174M
- Average Price per SqFt: 10,247.38

➡ 57% of the properties have been sold, indicating that more than half of the listed properties have converted into sales.

2. Monthly Sales Trend

- January shows the highest monthly sales at approximately 190M.
- June is another strong month at approximately 185M.
- March records the lowest sales at approximately 40M.
- Sales recover significantly from March and remain relatively strong through April–September.
- October shows another noticeable decline before sales increase again in November.

➡ The sales pattern is volatile, with significant month-to-month fluctuations.

3. Average Price per SqFt by City

Based on the chart:

- Delhi has the highest average price per SqFt, around 12K+.
- Nashik and Nagpur follow.
- Ahmedabad, Bengaluru and Chennai are in the middle range.
- Pune has the lowest average price per SqFt among the displayed cities, around 9K.

➡ There is a clear difference in property pricing between cities, with Delhi commanding the highest average price per SqFt in this dataset.

4. Property-Type Distribution

Your donut chart shows an even distribution:

- Apartment — 15 (20%)
- Independent — 15 (20%)
- Plot — 15 (20%)
- Studio — 15 (20%)
- Villa — 15 (20%)

→ The dataset has equal representation across all five property types.

5. Agent Performance

The Properties Sold by Agents treemap shows that sales are distributed among multiple agents, with some agents occupying noticeably larger sections.

→ This visualization can be used to identify agents handling a larger share of sold properties and compare their contribution.

6. Geographic Distribution

The map shows property/agent activity across major cities including:

Delhi, Ahmedabad, Kolkata, Mumbai, Pune, Bengaluru and Nashik, among others.

➡ The dashboard indicates that the dataset covers a broad geographic market rather than a single city.

Overall Insights:

- 100 properties are listed with a combined listed value of 2.04 billion.
- 57 properties have been sold, generating total sales of 1.174 billion.
- January recorded the highest monthly sales, while March recorded the lowest.
- Delhi has the highest average property price per square foot among the analyzed cities.
- Pune has the lowest average price per square foot among the displayed cities.
- All five property types have an equal 20% representation in the dataset.
- Property activity is distributed across multiple major cities and agents.
